

To update your server with the root description and health endpoints, replace your existing file code with the snippets below.

Node.js Lane (Express)

Update your `server.js` file:

javascript

```
const express = require('express');
const app = express();
const PORT = 3000;

// Root endpoint describing the API
app.get('/', (req, res) => {
  res.json({
    name: "Task API",
    version: "1.0",
    endpoints: ["/tasks"]
  });
});

// Health check endpoint
app.get('/health', (req, res) => {
  res.json({ status: "ok" });
});

app.listen(PORT, () => {
  console.log(`Server running on http://localhost:${PORT}`);
});
```

Use code with caution.

Python Lane (FastAPI)

Update your `main.py` file:

python

```
from fastapi import FastAPI
```

```
app = FastAPI()

# Root endpoint describing the API
@app.get("/")
def read_root():
    return {
        "name": "Task API",
        "version": "1.0",
        "endpoints": ["/tasks"]
    }

# Health check endpoint
@app.get("/health")
def read_health():
    return {"status": "ok"}
```

Use code with caution.

🏁 Checkpoint Verification

Restart your server and run these commands in your terminal to verify:

- **Test Root:** `curl -i http://localhost:3000/` (or port `8000` for FastAPI)
- **Test Health:** `curl -i http://localhost:3000/health` (or port `8000` for FastAPI)

💾 Git Commit

Run these commands in your terminal to save your progress:

```
bash

git add .
git commit -m "Stage 1: root and health endpoints"
```

Use code with caution.
