

To get your server up and running, you need to initialize your project, install the framework, write the server code, and launch it. Here is how to complete this checkpoint for both lanes.

Node.js Lane (Express)

1. **Initialize project:** Run `npm init -y` in your terminal.
2. **Install Express:** Run `npm install express`.
3. **Create server file:** Create a file named `server.js` and paste this code:

javascript

```
const express = require('express');
const app = express();
const PORT = 3000;

app.get('/', (req, res) => {
  res.send('Hello World!');
});

app.listen(PORT, () => {
  console.log(`Server running on http://localhost:${PORT}`);
});
```

Use code with caution.

4. **Start server:** Run `node server.js`.
5. **Verify:** Open a new terminal and run `curl -i http://localhost:3000/`
